

Intelligent, Efficient, and Scalable Security for Growing Companies and M&A

As organizations grow, the spotlight is often on the intersection of people, finances, operations, and technology. With so many moving pieces, the consideration of physical security systems is often an overlooked afterthought which can cause vulnerabilities down the line.

The **HiveWatch® GSOC Operating System** allows growing companies to easily scale and connect their disparate security systems without ripping and replacing their current expensive infrastructure.

Product Highlights

- **No need to rip and replace:** Our cloud-based SaaS platform was built for physical security teams to enhance their current security technologies. It requires no additional hardware and consolidates your disparate systems without the need to rip and replace.
- **Ability to quickly and easily scale:** Optimize people, processes, and legacy systems to grow alongside the business with the power to rapidly integrate new and acquired security systems.
- **Validate security performance:** Easily access and share data and metrics to understand the status of your programs. Gain critical buy-in from leadership using clear and informative statistics.
- **Optimize processes across teams:** With embedded Standard Operating Procedures (SOPs), your team is able to find answers and respond to incidents quickly in a centralized, easily accessible location.

Common concerns for growing companies:

Disparate systems

Identifying new weaknesses

Maintaining compliance

C-suite buy-in
